🎉 WebStarter CLI v2.0 - Changelog

🚀 What's New in v2.0

Major Improvements

✨ Enhanced Project Structure

- **Lymora.tech-inspired architecture -** Smart, scalable folder organization
- **Professional directory layout** with dedicated folders for:
  - API endpoints (auth, dashboard, payments, webhooks)
  - Assets (CSS, JS, icons, fonts, images, favicon)
  - Configuration files
  - User and admin pages
  - Database schemas

🎨 Phosphor Icons Integration

- **Automatic download** of complete Phosphor Icons library
- **6 icon styles** included: Regular, Bold, Light, Fill, Duotone, Thin
- **4000+ icons** ready to use
- Icons extracted to `assets/icons/` for immediate use

📧 PHPMailer Auto-Installation

- **Automatic Composer setup -** No manual configuration needed
- **Smart Composer detection -** Finds installation on Windows/Mac/Linux
- **Path caching -** Remembers Composer location after first use
- **Error handling -** Clear instructions if installation fails

🔐 Complete Authentication System

- **Login API** with session management
- **Registration API** with password hashing
- **Logout functionality**
- **Password reset foundation** ready to extend
- **Frontend pages** with working forms and AJAX

🗄️ Production-Ready Database Schema

- **Users table** with email, password, role, timestamps
- **Password resets table** for password recovery
- **Sessions table** for session tracking
- **Foreign key relationships** properly configured
- **UTF8MB4 charset** for full Unicode support

🌐 Clean URL Routing

- **Professional .htaccess** configuration
- **Removes .php extensions** automatically
- **Security headers** (X-Content-Type-Options, X-Frame-Options, X-XSS-Protection)
- **Compression enabled** for better performance
- **Sensitive file protection** (.env, composer.json, etc.)

⚙️ Environment Configuration

- **.env file support** for secure configuration
- **Environment loader** to read .env values
- **Separate development/production** modes
- **Security-focused** - .env excluded from version control

📱 Responsive Design

- **Mobile-first CSS** approach
- **Responsive breakpoints** for tablets and phones
- **Modern CSS variables** for theming
- **Clean, professional styling** out of the box

👨‍💼 Optional Admin Panel

- **Separate admin namespace**
- **Role-based access control** built-in
- **Admin dashboard** template included
- **Easy to extend** for custom admin features

🛡️ Enhanced Security

- **Password hashing** with PHP's password_hash()
- **PDO prepared statements** (SQL injection protection)
- **Session management** built-in
- **CSRF protection ready** framework
- **.htaccess security rules**
- **Environment variable protection**

📊 Comparison: v1.0 vs v2.0

Feature	v1.0	v2.0
Folder Structure	Basic	Lymora.tech-inspired ✨
Phosphor Icons	❌	✅ Auto-downloaded
PHPMailer	Manual	✅ Auto-installed
Authentication	Basic files	✅ Complete system
Database Schema	Empty file	✅ Production-ready tables
Admin Panel	❌	✅ Optional, built-in
.htaccess	Basic routing	✅ Professional config
Environment Config	❌	✅ .env support
Responsive CSS	Basic	✅ Mobile-first
Security	Basic	✅ Enhanced
Documentation	README only	✅ 4 detailed guides

🔧 Technical Improvements

Code Quality

- **Better error handling** throughout
- **Async/await patterns** for cleaner code

- **Modular functions** for maintainability
- **Comprehensive comments** in generated files

File Generation

- **Professional headers** with project name, author, date
- **Database singleton pattern** for efficient connections
- **Proper PHP namespacing** ready to extend
- **Clean separation** of concerns

Developer Experience

- **Interactive prompts** with better UX
- **Progress indicators** during setup
- **Clear success messages** with next steps
- **Error messages** with solutions
- **Path caching** for faster subsequent runs

Documentation

1. **README.md** - Complete feature overview
2. **INSTALLATION_GUIDE.md** - Detailed setup instructions
3. **WINDOWS_SETUP.md** - Windows-specific guide
4. **CHANGELOG.md** - Version history (this file)

📦 Generated Project Features

API Endpoints

```
api/
├── auth/
│   ├── login.php        ✅ Working login API
│   ├── register.php     ✅ Working registration API
│   └── logout.php       ✅ Session destruction
├── dashboard/           📁 Ready for your APIs
├── payments/            📁 Payment integrations
```

```
├── utilities/        📁 Helper functions
└── webhooks/         📁 Webhook handlers
```

Frontend Pages

```
pages/
├── public/
│   ├── index.php       ✅ Homepage
│   ├── login.php       ✅ Login page with AJAX
│   └── register.php    ✅ Registration page
├── user/
│   └── dashboard.php   ✅ User dashboard
└── admin/
    └── dashboard.php   ✅ Admin panel (optional)
```

Configuration

```
config/
├── constants.php       ✅ App constants
├── env.php             ✅ Environment loader
└── database.php        ✅ Database singleton class
```

🎯 What This Means for You

Before v2.0

```bash
# Old workflow
1. Create project ⏱️ 5 min
2. Download icons manually ⏱️ 10 min
3. Install Composer ⏱️ 5 min
4. Install PHPMailer ⏱️ 5 min
5. Write auth code ⏱️ 30 min
6. Create database schema ⏱️ 15 min
7. Setup .htaccess ⏱️ 10 min
8. Configure environment ⏱️ 5 min

Total: ~85 minutes 😓
```

With v2.0

```bash
# New workflow
1. Run: webstarter ⏱️ 1 min
2. Import database ⏱️ 1 min
3. Configure .env ⏱️ 2 min
4. Start coding ⏱️ immediately

Total: ~4 minutes 🚀
```

Time saved: 81 minutes per project!

🌟 New Dependencies

Required

- `inquirer@^9.2.12` - Interactive CLI prompts
- `shelljs@^0.8.5` - Shell command execution
- `adm-zip@^0.5.10` - ZIP extraction for icons

Auto-Installed in Projects

- `phpmailer/phpmailer` - Email sending (via Composer)

🔮 Future Roadmap (v2.1+)

Planned Features

- [ ] **Tailwind CSS** integration option
- [ ] **React/Vue** frontend scaffolding
- [ ] **RESTful API generator** with Swagger docs
- [ ] **Docker** configuration files
- [ ] **Testing framework** setup (PHPUnit)
- [ ] **CI/CD** templates (GitHub Actions)
- [ ] **Payment gateway** integrations (Stripe, Flutterwave)
- [ ] **Social auth** templates (Google, Facebook)
- [ ] **Email templates** library

- [ ] **Admin CRUD generator** for tables
- [ ] **API documentation** auto-generation
- [ ] **Multi-language** support

🐛 Bug Fixes

Fixed in v2.0

- ✅ Composer path detection on Windows
- ✅ File permission issues on Linux/Mac
- ✅ Missing folder creation for nested directories
- ✅ Database connection errors with empty passwords
- ✅ .htaccess not working on some servers
- ✅ Icon download failures with better error handling

🙏 Credits

v2.0 Contributors

- Enhanced by analysis of lymora.tech architecture
- Inspired by modern PHP frameworks
- Built with feedback from PHP developers

Technologies

- **Node.js** - CLI runtime
- **Inquirer** - Interactive prompts
- **ShellJS** - Cross-platform shell commands
- **Phosphor Icons** - Beautiful icon library
- **PHPMailer** - Email functionality
- **Composer** - PHP dependency management

📈 Statistics

Lines of Code

- **v1.0:** ~200 lines
- **v2.0:** ~1000+ lines
- **Generated project:** ~500+ lines of production-ready code

Files Generated

- **v1.0:** ~8 files
- **v2.0:** ~20+ files

Features

- **v1.0:** 5 features
- **v2.0:** 15+ features

🎓 Migration Guide (v1.0 → v2.0)

For Existing Users

Option 1: Clean Install (Recommended)

```bash
npm uninstall -g webstarter-cli
npm install -g webstarter-cli@latest
```

Option 2: Update

```bash
npm update -g webstarter-cli
```

For Existing Projects

v2.0 doesn't break existing projects. To upgrade:

1. Create new project with v2.0
2. Copy your custom code to new structure

3. Update database schema from `dbschema/database.sql`
4. Update `.htaccess` for better security
5. Add `.env` configuration

📞 Support

Getting Help

- Check **INSTALLATION_GUIDE.md** for detailed setup
- See **WINDOWS_SETUP.md** for Windows-specific help
- Read **README.md** for feature overview

Reporting Issues

Include:

- OS and version
- Node.js version
- PHP version
- Error messages
- Steps to reproduce

🎉 **Thank you for using WebStarter CLI v2.0!**

Made with ❤️ for PHP developers who value their time.

Version History

- **v2.0.0** (Current) - Major overhaul with lymora.tech architecture
- **v1.0.0** - Initial release
